

DG-II ARD

Anti Rotation Device

Patent Number: 5,562,418 2,665,772, 2,127,726

Motion Industries has developed the most advanced ARD on the market, offering a safe solution for vertical shaft, air cooler, belt driven fans.

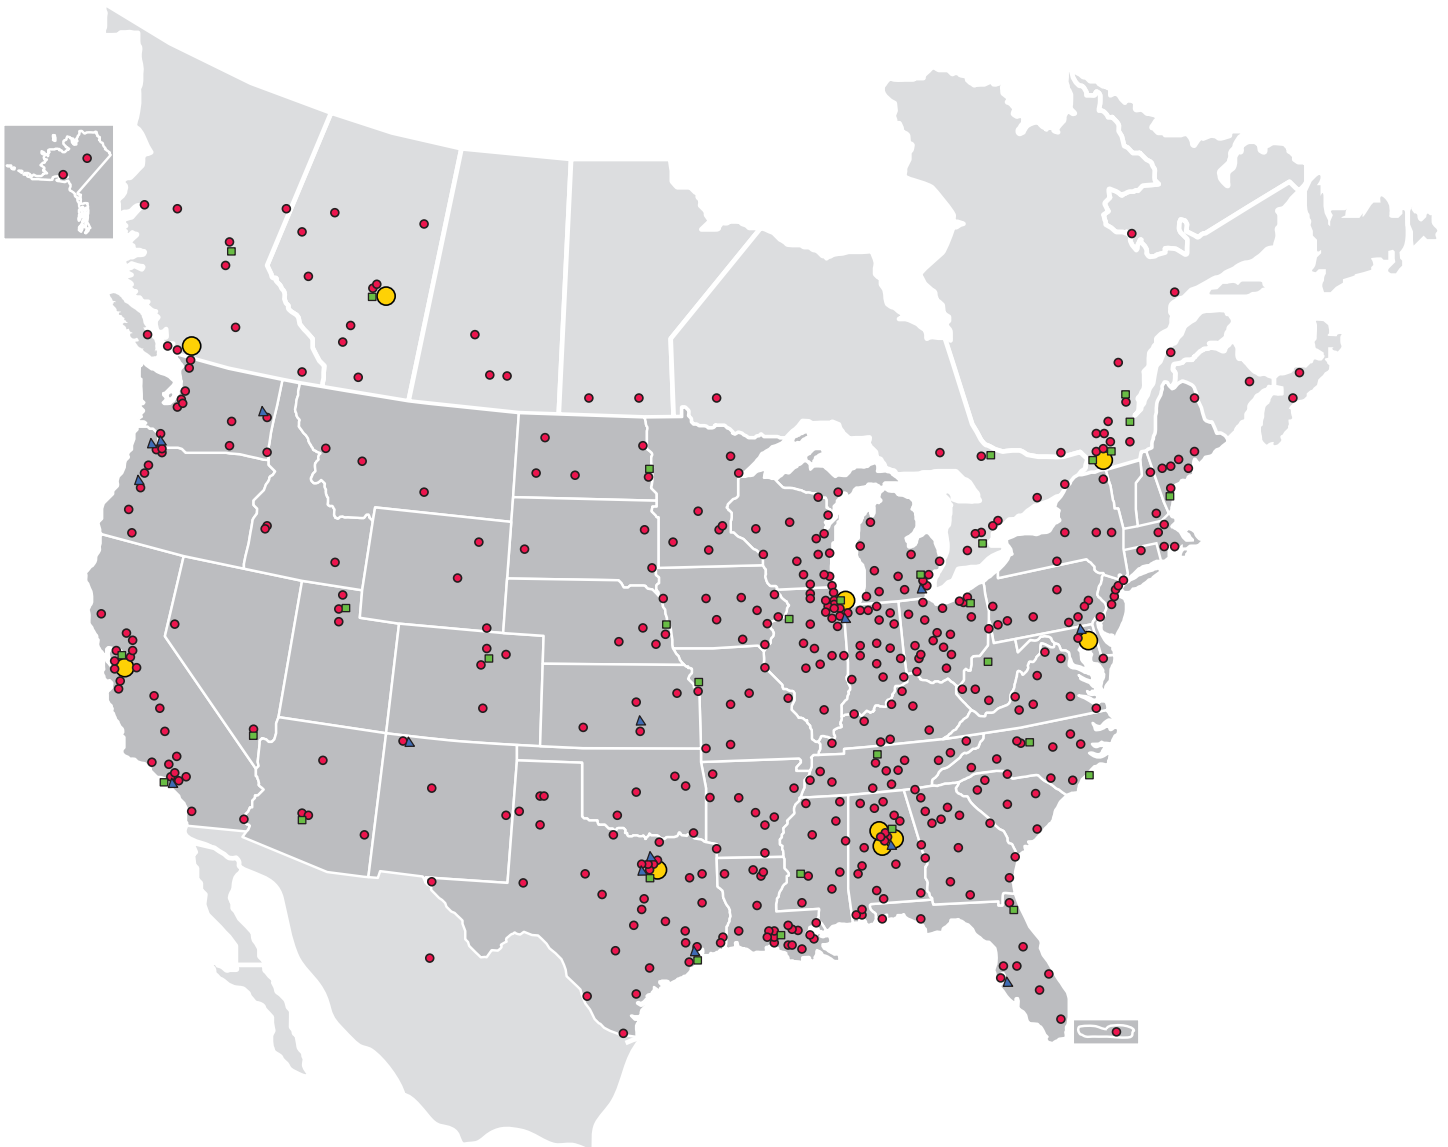

Fans that are allowed to spin backwards pose safety risks to workers, can break expensive belts or damage other rotating equipment. This issue is well documented and it causes downtime, or worse, lost time due to injury. This new universal mount ARD eliminates damage created by wind-milling fans. Motion has developed the most advanced, patented universal mount ARD using the original Formsprag clutch that has many years of proven field reliability.

Features of the DG-II

- Formsprag quality clutch with 3,400inlbs of holding capacity (strongest holding capacity on the market)
- Grease for life maintenance-free unit
- Eliminates hard starts on wind milling fans, which prolongs belt service life
- Eliminates safety issues on wind milling fans
- Can be used for both clockwise and counter-clockwise rotation
- New low profile allows for mounting under the fan pulley without fan guard modifications
- The most advanced universal mount spacer available for QD and TL bushings in each kit
- Easy to field-mount using standard bolts from your stock
- Cable and D-bolt supplied in each kit
- Mounts to shaft ends with our simple, low-cost C-ring design (optional)
- ARD can be refurbished by Motion, Contact your local branch for details

Motion Canada's operations are strategically located to serve you. With 3 major distribution centers, 10 repair centers and over 50 local branches, we are committed to keeping your industry in motion.

Our local sales and service specialists are experts in application and technical support, providing the parts and the know-how you need to stay up and running.
